CAREER OBJECTIVE:

Software Engineer with hands-on experience in Java, Spring Boot, Microservices, and SQL, building scalable backend systems handling 100K+ transactions/day. Strong in Data Structures & Algorithms and system design. Seeking SDE roles to develop high-performance, distributed applications in product-based environments.

EXPERIENCE:

Oracle Software Engineer	Aug 2024- Present
- Developed and scaled high-throughput backend systems using Java, Spring Boot, and Microservices architecture, processing 100K+ transactions/day with low-latency performance. - Designed and implemented RESTful APIs for distributed system integration, improving service communication and data flow efficiency. - Optimized Oracle SQL queries for high-volume transactions, improving performance and response times. - Deployed and managed applications on WebLogic Server, ensuring high availability, fault tolerance, and production stability. - Customized FLEXCUBE modules using RAD Tool, improving configuration efficiency by 60%. - Diagnosed and resolved production issues using Java logs, SQL queries, WebLogic logs. - Worked in Agile/Scrum environment, collaborating with cross-functional teams for feature delivery.	
Appstrail Technology - Intern Salesforce Developer	Mar 2024- Jul 2024
Enterprise CRM Automation System (Salesforce, Apex, Salesforce Flows, CRM, Data Processing) - Implemented CRM workflows using Apex, Salesforce Flows, reducing manual effort by 40%. - Integrated Salesforce CRM with backend systems using REST APIs, ensuring seamless data synchronization. - Optimized data validation workflows across 5+ CRM modules, reducing latency by 35%. - Implemented Apex Triggers for data validation and automation, ensuring data integrity across objects. - Debugged and resolved production issues in Apex and LWC, improving system stability and reliability.	

SKILLS:

Programming Languages: Java, JavaScript.
Backend & Frameworks: Spring Boot, REST APIs, Spring MVC, Hibernate, Apex, Microservices, Lightning Web Components (LWC).
Databases: MySQL, Oracle SQL
Tools & Platforms: Git, WebLogic, Salesforce.
Core Concepts: Data Structures & Algorithms, OOP, System Design, DBMS.

PROJECTS:

Logistics Management System Project Forecasting Tools (Java, Spring Boot, MySQL, REST APIs) - Developed a full-stack logistics platform handling shipment booking, tracking, and delivery workflows. - Built scalable backend services using Spring Boot, supporting 1000+ records with concurrent processing. - Designed and implemented RESTful APIs for real-time shipment tracking and system integration. - Optimized MySQL queries, achieving sub-second response times for live tracking operations. - Designed using layered architecture and optimized for scalability and maintainability. - Worked in Agile/Scrum environment, collaborating with cross-functional teams for feature delivery.
Scalable Bidding & Auction System Project Forecasting Tools (Java, Spring Boot, MySQL, REST APIs) - Developed a real-time auction system supporting bid validation, highest bid tracking, and auction lifecycle management. - Implemented concurrent bid handling ensuring data integrity and consistency under multiple user interactions. - Optimized database queries for bid tracking, improving performance and accuracy in real-time bidding scenarios. - Built secure and scalable backend services using Spring Boot and REST APIs. - Implemented efficient data handling and concurrency control for high-throughput operations. - Designed system considering scalability, concurrency, and performance trade-offs.

CERTIFICATIONS & PUBLICATIONS

- Red Hat® Certified Enterprise Application Developer (Java, Spring, REST APIs, Enterprise Applications).
- Oracle Cloud Infrastructure 2023 Certified Multicloud Architect Associate, demonstrating expertise in OCI and multicloud architecture.
- Published research on Smart Agriculture System using IoT, enabling data-driven farming and automation.

EDUCATION:

KL University Bachelor of Technology, Computer Science Engineering CGPA: 8.78/10	Nov 2020 - May 2024 Guntur
